Powerex NFM IGBT Modules are designed for use in hard switching (15-30kHz) applications. Each module consists of two IGBT Transistors in a half-bridge configuration with each transistor having a reverse-connected super-fast recovery free-wheel diode. All components and interconnects are isolated from the heat sinking baseplate, offering simplified system assembly and thermal management

Features:

- Low Drive Power
- Low $E_{SW(off)}$
- Discrete Super-Fast Recovery Free-Wheel Diode
- Isolated Baseplate for Easy Heat Sinking

Applications:

- Power Supplies
- UPS
- Battery Powered Supplies
- Induction Heating

*Pulse width and repetition rate should be such that device junction temperature (T_j) does not exceed $T_{j(max)}$ rating.

**Represents characteristics of the anti-parallel, emitter-to-collector free-wheel diode (FWDi).

***Junction temperature (T_j) should not increase beyond 150°C .

**** T_C , T_f measured point is just under the chips.

*****Pulse width and repetition rate should be such as to cause negligible temperature rise.
